for a cleaner world

GATE REFLECT

Gate Reflect is a multifunctional chair with a flexible back for optimal comfort and support.

The chair comes in various compositions and is ideal for canteen- or conference facilities and educational establishments.

Gate Reflect is eco friendly and all components are 100% recyclable.

RECYCLED MATERIALS 

THE ARCHITECT'S THOUGHTS

”Reflect is a chair collection created with versatility and comfort in mind. The curvature of the chair’s almost paper-thin profile is dictated by the natural organic shape of the human body.

Reflect is designed with a minimum of material to achieve a, both visually and physically, very light chair with excellent support. The chair is reinforced with a core of recycled plastic, that gives Reflect its ergonomically correct firmness and the characteristic but simple signature curve on the backside.

In the same way as the seat, the series of armrests is designed for comfort by utilizing the freedom of plastic molding. The balanced curvature completes the chair and invites you in with open arms.

Reflect comes in a variety of colors that is defined from a contemporary spectrum and offers colors, which can either define or accommodate an already existing, interior design.

The humble expression and silky surface creates the framework for a chair that suits any situation with the ability to change its appearance from basic to exclusive depending on color, base, and choice of upholstery. But most importantly, Reflect a chair all about comfort and a chair that invites you to both rest, contemplate and reflect.

The Reflect collection is our take on the perfect multifunctional chair where simplicity, comfort, appearance and price all comes together.

- architect Thomas Pedersen

GATE CANTEEN

Gate Canteen is the perfect choice for any lunch room or dining hall.

The table is solid and the surface is clean-friendly. Suspensions are available for easier and more efficient cleaning.

CONCEPT FOLDING AND STATIONARY TABLES

The Concept tables are made of light quality materials and are available with bevelled or straight edges.

The tables are recommendable in any kind of indoor gathering space - conference areas, educational environments, workplaces etc.

CONCEPT FLIP TABLE

The Concept flip table is practical and easy to handle. It comes with 4 lockable castors.

The top can be tilted and the tables can be placed up against each other when not in use and thus take up less space.

ENVIRONMENT

As a furniture manufacturer we take part in the joint responsibility for protecting nature and the environment, and we therefore work with a continuously improved environmental effort.

The materials we use for our products are carefully selected with care for the environment, and our range of furniture produced from recycled materials is growing rapidly. We get our materials from environmentally certified subcontractors (ISO 14001), and parts of our range fully meet the criteria for certification with the EU Flower (Ecolabel).

All steel in production are RoHS Directive No. 2011/65 / EC and REACH Directive No. 2002/95 / EC, and aluminum frames are made of up to 100% recycled aluminum. We use environmental chrome coatings that comply with the standards for lacquer coating (DS / EN ISO 1456) and eliminate any risk of nickel allergy.

In chair production, we only use FSC-labeled wood, which i.a. guarantees that no more trees will be felled than the forest can reproduce. The plastic materials used are produced in accordance with the limits of PAK (polycyclic aromatic hydrocarbons) - a selection is produced in whole or in part from recycled polypropylene granules.

We also offer several sustainable fabric types - for example variants of up to 100% recycled polyester, which are produced from plastic granules from plastic bottles.

In addition, we guarantee a long life for each individual product. But our environmental efforts go beyond production, because it is also important to us that our products can be disposed of with as little footprint as possible, and our furniture can therefore, after the end of its life cycle, be easily dismantled and sorted at source. Our goal is as good as 100% circular production.
